Camp OAC Meeting Agenda #2

Topic 1 - Additional requirements

- Student Timeline
    - Requirements all taken in the next 2/3 weeks
    - Video demo Early November
    - Maybe a demo with limited functionality early December
- Customer database requirements, (Just names and emails vs profile etc), mention Security requirements (look into this for next week).
- Pick-up locations (Integrated map or just an address list)
- Stock reminders (Are all locations stocked at the same time? Stock notifications only for customers' preferred location?) Do we need to keep track of stock? user/staff login functionality.

Meeting notes:

Storing data: have user profiles, be able to see purchase history, preferences, whos a recurring clients, email, time and date of purchase, able to be proactive, know who needs wood when (give priority to returning customers)

Go to facebook for website link, market to existing clients, **don't want any sign** on process. Use email for orders. Makes things simpler.

Stock: Location stock depends on volunteers who can cut the wood, is there a truck to transport? How many bags are in stock? No stock notifications until order has been made, after order has been made, show stock.

Warehouse component: each locations manager will have site idea of stock
Keep separate data warehouse for wood stock in which the manager can modify.

When a user buys wood, a notification is sent to location manager and the stock is changed in data warehouse

Mapping: Have a map **AND** a list of locations available for customers to view options
Do not have map public, until purchase is made, because lornes house is a location
(generalized areas before purchase, upon purchase completion give specific address, at this point put amount down)

User groups:

Mixed groups, mostly local, ranges from 14-60/70's+ AKA ANYONE WHO NEEDS WOOD

Transactions: require facebook account? no.
